

## PM6A6 Coil Isolator

### PM6A6 Coil Isolator

To be used when combining two or three HT coils of the same voltage for connection to a Lucas Rita (or 'Revival') ignition system. The unit electrically isolates the coils so up to three coils can be fired together. For full information on coil types and detailed connection guide please download the "Rita Revival" fitting guide from our website.

Pins 1, 2 & 3 go to the HT coils being connected, it does not matter in which order. If using two coils one pin will be left unused, it does not matter which.

The black/white connects to the coil connection of the Lucas Rita ignition.

**It does not matter in which order the HT coils are connected - all fire together**
